NEW QUESTION: 2

Sie haben eine AlwaysOn-Verfügbarkeitsgruppe mit zwei Replikaten in Microsoft Azure. Eine vollständige Sicherung der Datenbank beträgt 3 TB. Alle 15 Minuten wird eine Transaktionsprotokollsicherung durchgeführt. Jede Transaktionsprotokollsicherung hat eine Größe von 150 MB. Alle vollständigen Sicherungen und Transaktionsprotokollsicherungen werden mithilfe von SQL Server Backup to URL erstellt. Ihr Unternehmensnetzwerk verfügt über eine Internetverbindung mit 20 MB / s, die für die SQL Server-Replikation reserviert ist. Sie möchten der Verfügbarkeitsgruppe ein lokales Replikat hinzufügen. Das Replikat wird nur zur Berichterstellung verwendet. Sie müssen die Sicherungen von Azure in das Unternehmensnetzwerk kopieren, um sicherzustellen, dass Sie das lokale Replikat so schnell wie möglich initialisieren können. Die Lösung muss die Unterbrechung der Backups minimieren. Welche Technologie sollten Sie für jeden Sicherungstyp verwenden? Ziehen Sie zum Beantworten die entsprechenden Technologien auf die richtigen Sicherungstypen. Jede Technologie kann einmal, mehrmals oder gar nicht verwendet werden. Möglicherweise müssen Sie die geteilte Leiste zwischen den Fenstern ziehen oder einen Bildlauf durchführen, um den Inhalt anzuzeigen. HINWEIS: Jede richtige Auswahl ist einen Punkt wert.

NEW QUESTION: 3

View the Exhibit.

Refer to the exhibit. An architect is planning an HPE Moonshot System with m710 cartridges to support a customer application virtualization solution. The customer indicated that the maximum acceptable response time for the solution is three seconds. The architect has implemented a POC and tested a single cartridge with different numbers of user sessions. The architect monitored resource utilization throughout the tests. The results of the test with the point at which the response time exceeded three seconds are shown, marked as the "VSI max." What should the architect conclude from this test?

- A.** CPU becomes a limiting factor around 50 sessions, so the architect should propose at least one cartridge per 45 or 50 users.
- B.** The memory becomes a bottleneck before other resources, so the architect should propose m400 cartridges, which provide a higher memory capacity.
- C.** The network adapter becomes a bottleneck before other resources, so the architect should propose m710p cartridges, which provide 10GbE ports.
- D.** None of the monitored resources shows signs of being a bottleneck, so the architect should consider other factors such as the HPE Moonshot switch module.
