Answer:

Explanation:

Explanation

Box 1: var todoTable = client GetSyncTable<TodoItem>();

To setup offline access, when connecting to your mobile service, use the method GetSyncTable instead of GetTable (example):

```
IMobileServiceSyncTable todoTable =  
App.MobileService.GetSyncTable(); / Box 2: await
```

```
todoTable.PullAsync("allTodoItems",todo.Table.CreateQuery());
Your app should now use IMobileServiceSyncTable (instead of
IMobileServiceTable) for CRUD operations.
This will save changes to the local database and also keep a
log of the changes. When the app is ready to synchronize its
changes with the Mobile Service, use the methods PushAsync and
PullAsync (example):
await App.MobileService.SyncContext.PushAsync();
await todoTable.PullAsync();
