### NEW QUESTION: 2

Which two statements about port ACLs are true? (Choose two.)

- A.** When it is applied to trunk ports, the port ACL filters only native VLAN traffic.
- B.** When it is applied to a port with voice VLAN, the port ACL filters both voice and data VLAN traffic.
- C.** Port ACLs support both outbound and inbound traffic filtering.
- D.** Port ACLs are supported on physical interfaces and are configured on a Layer 2 interface on a switch.

**Answer: B,D**

Explanation:

PACLs filter incoming traffic on Layer 2 interfaces, using Layer 3 information, Layer 4 header information, or non-IP Layer 2 information. The port ACL (PACL) feature provides the ability to perform access control on specific Layer 2 ports. A Layer 2 port is a physical LAN or trunk port that belongs to a VLAN. Port ACLs perform access control on all traffic entering the specified Layer 2 port, including voice and data VLANs that may be configured on the port. Port ACLs are applied only on the ingress traffic.
