**NEW QUESTION: 2**

A penetration tester is inspecting traffic on a new mobile banking application and sends the following web request:

POST http://www.example.com/resources/NewBankAccount HTTP/1.1

Content-type: application/json

```
{
  "account":
  [
    { "creditAccount": "Credit Card Rewards account" }
    { "salesLeadRef": "www.example.com/badcontent/exploitme.exe" }
  ],
  "customer":
  [
    { "name": "Joe Citizen" }
    { "custRef": "3153151" }
  ]
}
```

The banking website responds with:

```
HTTP/1.1 200 OK
```

```
{  
  "newAccountDetails":  
  [  
    { "cardNumber": "1234123412341234" }  
    { "cardExpiry": "2020-12-31" }  
    { "cardCVV": "909" }  
  ],  
  "marketingCookieTracker": "JSESSIONID=000000001"  
  "returnCode": "Account added successfully"  
}
```

Which of the following are security weaknesses in this example? (Select TWO).

- A. Vulnerable to SQL injection
- B. Vulnerable to XSS
- C. Missing input validation on some fields
- D. JSON/REST is not as secure as XML
- E. Vulnerable to malware file uploads
- F. Sensitive details communicated in clear-text

**Answer: C,F**

Explanation:

The SalesLeadRef field has no input validation. The penetration tester should not be able to enter

"www.example.com/badcontent/exploitme.exe" in this field.

The credit card numbers are communicated in clear text which makes it vulnerable to an attacker. This kind of information should be encrypted.

Incorrect Answers:

B: There is nothing to suggest the system is vulnerable to SQL injection.

D: There is nothing to suggest the system is vulnerable to XSS (cross site scripting).

E: Although the tester was able to post a URL to malicious software, it does not mean the system is vulnerable to malware file uploads.

F: JSON/REST is no less secure than XML.

**NEW QUESTION: 3**

- A. Option D
- B. Option C
- C. Option B
- D. Option A

**Answer: B**
