NEW QUESTION: 1

DRAG DROP

You are deploying a Microsoft Azure SQL Database environment: You need to configure the environment to meet the following requirements:

Access to databases must be logged.

Email alerts must be sent to the database administrator if anomalous activity is detected.

What should you do? To answer, drag the appropriate solutions to the correct requirements. Each solution may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:

Box 1: Enable database auditing

Box 2: Enable threat detection

SQL Database Threat Detection runs multiple sets of algorithms

which detect potential vulnerabilities and SQL injection attacks, as well as anomalous database access patterns (such as access from an unusual location or by an unfamiliar principal). Security officers or other designated administrators get email notification once a threat is detected on the database. Each notification provides details of the suspicious activity and recommends how to further investigate and mitigate the threat.
