NEW QUESTION: 2
Which statement is true about virtual machine (VM) snapshots?
A. A single delta disk file is used for all the snapshots of a VM.
B. A snapshot provides a zero recovery point objective.
C. A parent virtual disk is not required for recovery from a snapshot.
D. A snapshot holds only changed blocks.
Answer: D

NEW QUESTION: 3
Tom is troubleshooting NAT issues using fw monitor and Wireshark. He tries to initiate a connection from the external network to a DMZ server using the public IP which the firewall translates to the actual IP of the server. He analyzes the captured packets using Wireshark and observes that the destination IP is being changed as required by the firewall but does not see the packet leave the external interface. What could be the reason?
A. The translation might be happening on the client side and the packet is being routed by the OS back to the external interface.
B. The translation might be happening on the server side and the packet is being routed by OS back to the external interface.
C. After the translation, the packet is dropped by the Anti-Spoofing Protection.
D. Packet is dropped by the firewall.
Answer: B

NEW QUESTION: 4
A server administrator recently upgraded a three-year-old server by replacing the old CPU and memory with a new CPU and memory. After the upgrade, the server regularly generates CPU and memory errors; however, the server is working. The administrator has confirmed the new CPU and memory are not faulty.
Which of the following is the MOST likely cause of this problem?
A. Bad motherboard
B. Bad memory and CPU chipset
C. Outdated BIOS and firmware
D. Outdated RAID controller
Answer: C
