- B. It is not necessary to add a static route to the Gateway's routing table.
- C. VLAN tagging cannot be defined for any hosts protected by the Gateway.
- D. The Security Gateway's ARP file must be modified.

Answer: B

NEW QUESTION: 2

Rick works as the Network Administrator of Baby Blue Inc. He wants to upgrade the existing network to the Active Directory based Windows 2000 network.

He configures a DNS on the network. Which of the following is the primary reason that the DNS is required in an Active Directory environment?

- A. Without installing the DNS, you cannot install the Active Directory in the network.
- B. The Active Directory uses the DNS zone transfer protocol during replication.
- C. The Active Directory is stored within the DNS database.
- D. Netlogon uses the DNS to find a domain controller in the network.

Answer: D

NEW QUESTION: 3

Refer to the exhibit.

What is the result of the configuration?

- A. The EtherChannels would form and both devices would use the dst-ip load-balancing method because Switch1 is configured with EtherChannel mode active.
- B. The EtherChannels would form and function properly even though the load-balancing and EtherChannel modes do not match.
- C. The EtherChannels would form, but network loops would occur because the load-balancing methods do not match.
- D. The EtherChannels would not form because the load-balancing method must match on the devices.

Answer: B

Explanation:

Explanation/Reference:

Explanation:

An etherchannel will form if one end is active and the other is passive. The table below summarizes the results for LACP channel establishment based on the configuration of each side of a link:

LACP Channel Establishment

Load balancing can only be configured globally. As a result, all channels (manually configured, PagP, or LACP) use the same load-balancing. This is true for the switch globally, although each switch involved in the etherchannel can have non matching parameters for load balancing.
