**Answer: A**

Explanation:

Lightweight APs (LAPs) is devices require no initial configuration. LAPs use the Lightweight Access Point Protocol (LWAPP) to communicate with a WLAN controller (WLC), as shown in the below figure. Controller-based APs are useful in situations where many APs are required in the network. As more APs are added, each AP is automatically configured and managed by the WLC.

**NEW QUESTION: 4**

Management requires you to build a new logical topology for a new application that will include a hardware search appliance (HAS). The new application must contain a web tier and database tier on separate IP domains. Use the existing App01-DLR to complete the task.

Requirements:

vCenter: vcsa-01.corp.local  
Credentials: [\[email&#160;protected\]](#) / VMware1!

vDS: vds-mgt-edge-a  
Existing DLR Name: App01-DLR  
New object prefix - App01  
New object suffic - New

Create a new distributed port group for this task named vds-HSA-NEW.  
The HAS must reside on the same IP subnet as the database.  
The new application must contain a web tier and database tier on separate domains to be used at a future date.  
Once deployed the HAS will be connected to a network with VLAN ID 500.  
The proper physical switch ports for the uplinks have already

been trunked to include VLAN 500.

VLANs configured in the compute racks are isolated to a single rack.

Any objects/items created must be named with a prefix of App01 and a suffix containing their function with NEW (for example: App01-Function-NEW) NOTE:

The hardware appliance and application virtual machines have not been deployed. Attempts to connectivity to the appliance will not succeed.

Module 1

See the explanation part for complete solution.

**Answer:**

Explanation:

SOLUTION:

Step 1: From SiteA vCenter web client -> Networking -> Data Center SiteA -> create a new distribution port group named vds-HAS-NEW with VLAN ID 500 in vds-mgmt-edge.

Create LS on 192.168.110.15 = App01-WebTier-NEW

Create LS on 192.168.110.15 = App01-DBTier-NEW

NSX Edges -> App01-DLR

8) got NsX Edge and select App01-DLR. select Manage, select settings and click on + Sign (9) Enter interface name App01-Web-New, select type internal. select App01-Webtier-New LS Enter ip address 192.168.1.1/24. repeat the same steps for App01-DBtier-New but take ip address 192.168.2.1 /24

Name: App01-Bridge-NEW

Logical Switch: App01-DBTier-NEW

Distributed Port Group: vds-HAS-NEW

(11) be sure under App01-DB-New the bridging is enable.
