Fastest Way To Get Through GAQM ISO-27701-CLA Premium APP and PDF Exams Files, While passing the ISO-27701-CLA practice exam is a necessity, so how can you pass the exam effectively.

And you just need to 20-30 hours to prepare before the real test, ITCertKing is the best choice for you, and also is the best protection to pass the GAQM ISO-27701-CLA certification exam.

They were compiled based on real test questions, To help you learn with the newest content for the ISO-27701-CLA preparation materials, our experts check the updates status every day, and their diligent work as well as professional attitude bring high quality for our ISO-27701-CLA practice engine.

You can compare their quality [ISO/IEC 27701 - Certified Lead Auditor](#) and precision with all the study sources available to you.

NEW QUESTION: 1

Refer to the exhibit.

Which interface configuration must be configured on the spoke A router to enable a dynamic DMVPN tunnel with the spoke B router?

- A. Option B
- B. Option C
- C. Option D
- D. Option A

Answer: A

Explanation:

Explanation

The command `ip nhrp map multicast dynamic` should be only used on Hub router, not spoke. If we are running dynamic routing protocols based on multicast (like RIP, OSPF, EIGRP ...) we have to add the command `ip nhrp map multicast dynamic` in Hub to replicate all multicast traffic to all dynamic entries in the NHRP table (multicast will be proceeded as unicast traffic) - The tunnel source `FastEthernet0/0` is equivalent to tunnel source `172.17.0.2`, which is the NBMA address of Spoke A.

NEW QUESTION: 2

Physical documents must be incinerated after a set retention period is reached. Which of the following attacks does this action remediate?

- A. Shoulder Surfing
- B. Phishing
- C. Impersonation
- D. Dumpster Diving

Answer: D

Explanation:

Section: Threats and Vulnerabilities

Explanation/Reference:

Explanation:

Incinerating documents (or shredding documents) instead of throwing them into a bin will prevent people being able to read the documents to view sensitive information. Dumpster diving is looking for treasure in someone else's trash. (A dumpster is a large trash container.) In the world of information technology, dumpster diving is a technique used to retrieve information that could be used to carry out an attack on a computer network. Dumpster diving isn't limited to searching through the trash for obvious treasures like access codes or passwords written down on sticky notes. Seemingly innocent information like a phone list, calendar, or organizational chart can be used to assist an attacker using social engineering techniques to gain access to the network. To prevent dumpster divers from learning anything valuable from your trash, experts recommend that your company establish a disposal policy where all paper, including print-outs, is shredded in a cross-cut shredder before being recycled, all storage media is erased, and all staff is educated about the danger of untracked trash.

NEW QUESTION: 3

In what type of attack does an attacker capture packets containing passwords or digital signatures whenever packets pass between two hosts on a network?

- A. DoS attack
- B. Replay attack
- C. Ping flood attack
- D. Dictionary attack

Answer: B
