NEW QUESTION: 1

How many video endpoints can call into a CMR Cloud meeting?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

NEW QUESTION: 2

You are building a mobile app for consumers to post cat pictures online.

You will be storing the images in AWS S3. You want to run the system very cheaply and simply.

Which one of these options allows you to build a photo sharing application without needing to worry about scaling expensive uploads processes, authentication/authorization and so forth?

A. Build the application out using AWS Cognito and web identity federation to allow users to log in using Facebook or Google Accounts. Once they are logged in, the secret token passed to that user is used to directly access resources on AWS, like AWS S3.

B. Create an AWS oAuth Service Domain and grant public signup and access to the domain. During setup, add at least one major social media site as a trusted Identity Provider for users.

C. Use JWT or SAML compliant systems to build authorization policies. Users log in with a username and password, and are given a token they can use indefinitely to make calls against the photo infrastructure.

D. Use AWS API Gateway with a constantly rotating API Key to allow access from the client-side.

Construct a custom build of the SDK and include S3 access in it.

Answer: A

Explanation:

The short answer is that Amazon Cognito is a superset of the functionality provided by web identity federation. It supports the same providers, and you configure your app and authenticate with those providers in the same way. But Amazon Cognito includes a variety of additional features. For example, it enables your users to start using the app as a guest user and later sign in using one of the supported identity providers. <https://blogs.aws.amazon.com/security/post/Tx3SYCORF5EKRC0/How-Does-Amazon-Cognito-Relate-to-Existing-Web-Identity-Federatio>

NEW QUESTION: 3

When should Connection Classification be enabled?

A. when Fastpass access is needed to log the connection

B. when handling mail for multiple internal domains

C. when another gateway handles the messages first

D. when deployed at the edge of the network

Answer: D
