namely, PDF version, software version and online APP version, you can feel free to choose any one of them as you like.

In contrast with other websites, Stegschool is more trustworthy.

**NEW QUESTION: 1**

Which two statements are correct about a VCF deployment?  
(Choose two.)

- A. The fabric is managed as a single logical device.
- B. You are allowed up to four spine devices.
- C. You must deploy a QFX5100 as a leaf device.
- D. An EX4300 switch must be deployed as a spine device.

**Answer: A,B**

**NEW QUESTION: 2**

Serial data transmission in which information can be transmitted in two directions, but only one direction at a time, is called:

- A. Simplex
- B. Half-duplex
- C. Synchronized
- D. Full-duplex

**Answer: B**

Explanation:

The time required to switch transmission directions in a half-duplex line is called the turnaround time.

\* Answer simplex refers to communication that takes place in one direction only.

\* Answer Synchronized is a distracter.

\* Full-duplex can transmit and receive information in both directions simultaneously. The transmissions can be asynchronous or

synchronous. In asynchronous transmission, a start bit is used to indicate the beginning of transmission. The start bit is followed by data bits and, then, by one or two stop bits to indicate the end of the transmission.

Since start and stop bits are sent with every unit of data, the actual

data transmission rate is lower since these overhead bits are used for

synchronization and do not carry information. In this mode, data is sent only when it is available and the data is not transmitted continuously.

In synchronous transmission, the transmitter and receiver have synchronized clocks and the data is sent in a continuous stream. The clocks are synchronized by using transitions in the data and, therefore, start and stop bits are not required for each unit of data sent.

**NEW QUESTION: 3**

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: A**

Explanation:
