NEW QUESTION: 1

Your company has two virtual machines that run Linux in a third-party public cloud.

You plan to use the company's Azure Automation State Configuration implementation to manage the two virtual machines and detect configuration drift.

You need to onboard the Linux virtual machines.

You install PowerShell Desired State Configuration (DSC) on the virtual machines, and then run register.py.

Which three actions should you perform next in sequence? To answer, move the actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation

NEW QUESTION: 2

Which statement is true regarding redundancy?

- A. ClusterXL offers three different Load Sharing solutions: Unicast, Broadcast, and Multicast.
- B. Both ClusterXL and VRRP are fully supported by Gaia and available to all Check Point appliances, open servers, and virtualized environments.
- C. Machines in a ClusterXL High Availability configuration must be synchronized.
- D. System Administrators know their cluster has failed over and can also see why it failed over by using the `cphaprob -f` if command.

Answer: B

NEW QUESTION: 3

You received an alert from your monitoring system that the master Routing Engine (RE) on an EX4300 switch in a virtual chassis has hardware issues and might need to be replaced. Because the switch already had graceful Routing Engine switchover (GRES) enabled and configured, you must perform a manual switchover to the backup RE to avoid disruption. Which command would be used to perform the manual RE switchover?

- A. Log in to the backup RE and issue `request chassis routing-engine master switchover` command.
- B. Log in to the backup RE and issue `request iccp-service operation` command.
- C. Log in to the backup RE and issue `request chassis-control operation` command.
- D. Log in to the backup RE and issue `request chassis routing-engine master acquire operation` command.

Answer: A
