Answer: D,E

NEW QUESTION: 3

You are installing Solaris 10 OS on a SPARC-based system with a graphical monitor and keyboard, but the installation starts up in CLI mode. Assuming you have typed the correct installation command, what is the cause?

- A. You used the DVD.
- B. The system has less than 128 megabytes of RAM.
- C. The system has less than 384 megabytes of RAM.
- D. Solaris OS is a text-only installation.
- E. The monitor is monochrome.

Answer: B

NEW QUESTION: 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have Microsoft SQL Server on a Microsoft Azure virtual machine that has a database named DB1.

You discover that DB1 experiences WRITE_LOG waits that are longer than 50 ms.

You need to reduce the WRITE_LOG wait time.

Solution: Add additional data files to DB1.

Does this meet the goal?

- A. Yes

B. No

Answer: B

Explanation:

In SQL Server, if we have a transactional based system and find a high WRITELOG wait type this is a performance bottleneck and can cause the transaction log file to grow rapidly and frequently.

It is being recommended to SQL server users that they must archive the log files on a separate disk for getting better performance.
