- D. snowflake schema
- E. star schema
- F. slowly changing dimension (SCD)
- G. dimension table reference relationship
- H. conformed dimension

Answer: F

NEW QUESTION: 3

You installed a new NetApp cluster running clustered Data ONTAP. There is a single Storage Virtual Machine (SVM) named esx1 on the cluster. A volume named esx_datastore1 is created in the SVM esx1. The name of the root volume for the esx1 SVM is esx1_rootvol. The default export policy was applied to the volume esx1_rootvol. You verified that the export policy applied to esx_datastore1 contains a single rule that allows all clients to mount the volume as read/write using any version of NFS. A Linux client attempts to NFS mount the volume and receives a Permission Denied error. In this scenario, what caused this error?

- A. The volume esx_datastore1 has not been mounted into the namespace of the esx1 SVM.

- B. NFS has not been configured on the SVM esx1.
- C. The default export-policy does not have at least one rule to allow all clients read-only access.
- D. UNIX permissions for the volume esx1_rootvol are not set to read/write.

Answer: C
