Now, let look at the best study material to get the AWS-Advanced-Networking-Specialty-KR certification, You will have a real try after you download our free demo of AWS-Advanced-Networking-Specialty-KR exam software.

We have a Amazon AWS-Advanced-Networking-Specialty-KR practice questions that provides multiple features including self-assessment features.

NEW QUESTION: 1
A VIA client tries to initially connect to corporate office controller through an intermediate firewall. However, the VPN connection fails. The administrator examines the firewall rules and determines that rules for UDP
4500 and UDP 500 are configured.
Which additional protocol must be allowed in the firewall rules to resolve this connection failure?
A. ESP
B. TCP 443
C. TCP 22
D. UDP 8200
Answer: A

NEW QUESTION: 2

Answer:
Explanation:

Explanation
Box 1: Import-AadrmTpd
Box 2: Connect-AadrmService
Box 3: Get-AadrmAdminLog
Although you can activate Azure Rights Management by using the Office 365 admin center or the Azure Management Portal, you can also use the Windows PowerShell module for Azure Rights Management to do this. First we active Azure Rights Management by import it through Import-AadrmTpd, then we connect to the service with Connect-AadrmService, and finally we generate the log with Get-AadrmAdminLog.
Step 1: The Import-AadrmTpd cmdlet imports an Active Directory

Rights Management Services (AD RMS) trusted publishing domain (TPD) over the Internet into your tenant for Azure Rights Management so that you can migrate Rights Management from on-premises to the cloud.
Step 2: The Connect-AadrmService cmdlet connects you to the Azure Rights Management service. This cmdlet can also be used by a partner company that manages your tenant.
Connect by using this cmdlet before you configure Rights Management by using other cmdlets in this module.
Step 3: The Get-AadrmAdminLog cmdlet generates logs for all Rights Management administrative commands.
