E. POST㕯æ^•åŠŸã•—㕾㕗㕟ã€,
Answer: A
Explanation:
http://www.cisco.com/en/US/products/hw/switches/ps607/products_tech_note09186a00801
25913.shtml
Each time you power up the switch, eight Power-On Self Tests (POSTs) run automatically.

POSTs check the most important system components before the switch begins to forward packets. When the switch begins the POST, the port status LEDs display amber for two seconds, and then display green. As each test runs, the port status LEDs go out. 1x is the first to go out.
The port status LEDs for ports 2x through 8x go out sequentially as the system completes a test.
When the POST completes successfully, the port status LEDs go out. This indicates that the switch is operational. If a test fails, the port status LED associated with the test displays amber.
The system LED also displays amber.
NotE. From Cisco IOS Software Release 11.2(8.5) SA6 onwards, the port and system LEDs both remain amber after a POST failure. In the earlier Cisco IOS Software Releases, only the LEDs of failed linked ports remained amber.

NEW QUESTION: 2
Which of the following wireless protocols could be vulnerable to a brute-force password attack? (Choose two.)
A. WPA2-CCMP
B. WPA - LEAP
C. WPA2-PSK
D. WEP
E. WPA -CCMP
F. WPA - EAP - TLS
Answer: C,D
Explanation:
Explanation/Reference:
Explanation:
A brute force attack is an attack that attempts to guess a password. WPA2-PSK and WEP both use a "Pre- Shared Key". The pre-shared key is a password and therefore is susceptible to a brute force attack.
