NEW QUESTION: 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be

able to return to it. As a result, these questions will not appear on the review screen.

You have a Microsoft Azure SQL database that contains sales data of your company. Several columns in the database contain sensitive client information.

You need to prevent all the members of the sysadmin role from reading the sensitive data.

Solution: You implement Transparent Data Encryption (TDE).

Does this meet the goal?

A. No

B. Yes

Answer: A

Explanation:

Explanation/Reference:

Explanation:

Instead, implement the Dynamic Data Masking feature.

Dynamic Data Masking masks the sensitive data "on the fly" to protect sensitive data from non-privileged users using built-in or customized masking functions, without preventing them from retrieving the unmasked data.
