The SenderIDStatus is 'Fail'. However, the email was still delivered due.

Use the Set-SenderIdConfig cmdlet to modify the configuration of the Sender ID agent. The SpoofedDomainAction parameter specifies the action that the Sender ID agent takes on the message when the sender domain shows evidence of being spoofed. The SpoofedDomainAction parameter takes the following values: StampStatus, Reject or Delete. The default value is StampStatus.

Two out of three update domains would be available, each with at least 3 VMs.

An update domain is a group of VMs and underlying physical hardware that can be rebooted at the same time.

As you create VMs within an availability set, the Azure platform automatically distributes your VMs across these update domains. This approach ensures that at least one instance of your application always remains running as the Azure platform undergoes periodic maintenance.
