#### **NEW QUESTION: 1**

Refer to the exhibit.

The two exhibited devices are the only Cisco devices on the network. The serial network between the two devices has a mask of 255.255.255.252. Given the output that is shown, what three statements are true of these devices? (Choose three.)

- A. The Manchester serial address is 10.1.1.2.
- B. The Manchester router is a Cisco 2610.
- C. The London router is a Cisco 2610.
- D. The Manchester serial address is 10.1.1.1.
- E. The CDP information was sent by port Serial0/0 of the London router.
- F. The CDP information was received on port Serial0/0 of the

Manchester router.

**Answer: C,D,F**

Explanation:

From the output, we learn that the IP address of the neighbor router is 10.1.1.2 and the question stated that the subnet mask of the network between two routers is

255.255.255.252. Therefore there are only 2 available hosts in this network ( $2^2 - 2 = 2$ ). So

we can deduce the ip address (of the serial interface) of Manchester router is 10.1.1.1 ->.

The platform of the neighbor router is cisco 2610, as shown in the output ->.

Maybe the most difficult choice of this question is the answer E or F.

Please notice that

"Interface" refers to the local port on the local router, in this case it is the port of Manchester

router, and "Port ID (outgoing port)" refers to the port on the neighbor router.

### **NEW QUESTION: 2**

When setting up Automated Installer (AI) clients, an interactive tool can be used to generate a custom system configuration profile. The profile will specify the time zone, data and time, user and root accounts, and name services used for an AI client installation. This interactive tool will prompt you to enter the client information and an SC profile (XML) will be created.

Which interactive tool can be used to generate this question configuration?

- A. sys-unconfig
- B. sysconfig create-profile
- C. installadm create-profile
- D. installadm set-criteria

**Answer: D**

Explanation:

Use the installadm set-criteria command to update the client criteria associated with an AI manifest that you already added to a service using installadm add-manifest.

Use the installadm add-manifest command to add a custom AI manifest to an install service.

The value of manifest is a full path and file name with .xml extension. The manifest file contains an AI manifest (installation instructions). The manifest file can also reference or embed an SC manifest (system configuration instructions).

### **NEW QUESTION: 3**

You need to create a table for a banking application. One of

the columns in the table has the following requirements:

1) You want a column in the table to store the duration of the credit period.

2) The data in the column should be stored in a format such that it can be easily added and subtracted with date data type without using conversion functions.

3) The maximum period of the credit provision in the application is 30 days.

4) The interest has to be calculated for the number of days an individual has taken a credit for.

Which data type would you use for such a column in the table?

**A. TIMESTAMP**

**B. INTERVAL YEAR TO MONTH**

**C. NUMBER**

**D. DATE**

**E. INTERVAL DAY TO SECOND**

**Answer: E**

Explanation:

INTERVAL DAY TO SECOND stores a period of time in terms of days, hours, minutes, and seconds. This data type is useful for representing the precise difference between two datetime values.

You can perform a number of arithmetic operations on date (DATE), timestamp (TIMESTAMP, TIMESTAMP WITH TIME ZONE, and TIMESTAMP WITH LOCAL TIME ZONE) and interval (INTERVAL DAY TO SECOND and INTERVAL YEAR TO MONTH) data.

-

It stores duration of the credit as days

-

The format stored is numeric format, and you know that numeric values can be easily added and subtracted with date data type without using conversion functions (i.e. SELECT SYSDATE - 1 FROM DUAL;)

-

The interest has to be calculated for the number of days an individual has taken a credit for, so it will be easy to calculate interest by using the interest rate and duration of the the credit which is numeric format.
