NEW QUESTION: 1

A. Option B
B. Option C
C. Option D
D. Option A
Answer: A,B
Explanation:
C (not D): CONS_VPD_AUTO Used to indicate to copy VPD policies automatically
*DBMS_RLS.ADD_POLICY / The DBMS_RLS package contains the fine-grained access control administrative interface, which is used to implement Virtual Private Database (VPD).DBMS_RLS is available with the Enterprise Edition only.
*CONS_USE_PK and CONS_USE_ROWID are constants used as input to the "options_flag"
parameter in both the START_REDEF_TABLE Procedure and CAN_REDEF_TABLE Procedure. CONS_USE_ROWID is used to indicate that the redefinition should be done using rowids while CONS_USE_PK implies that the redefinition should be done using primary keys or pseudo-primary keys (which are unique keys with all component columns having NOT NULL constraints).
*DBMS_REDEFINITION.START_REDEF_TABLE
To achieve online redefinition, incrementally maintainable local materialized views are used.
These logs keep track of the changes to the master tables and are used by the materialized views
during refresh synchronization.
*START_REDEF_TABLE Procedure
Prior to calling this procedure, you must manually create an empty interim table (in the same
schema as the table to be redefined) with the desired attributes of the post-redefinition table, and
then call this procedure to initiate the redefinition.
Note:

NEW QUESTION: 2
When running Data ONTAP in Cluster-Mode, which three statements are true about Asymmetric Logical Unit Access (ALUA)? (Choose three.)
A. It is a set of SCSI commands for discovering and managing multiple paths to LUNs on Fibre Channel SANs.
B. It no longer requires proprietary SCSI commands.
C. It allows the initiator to query the target about path attributes, such as primary path and secondary path.
D. There is no configuration required on the storage system.
E. It requires Array Support Library (ASL), a proprietary vendor library.
Answer: A,B,C
Explanation:

based access, second para)

NEW QUESTION: 3
Your company has offices in New York and Los Angeles.
You have an Azure subscription that contains an Azure virtual network named VNet1. Each office has a site-to-site VPN connection to VNet1.
Each network uses the address spaces shown in the following table.

You need to ensure that all Internet-bound traffic from VNet1 is routed through the New York office.
What should you do? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:
Explanation:

Explanation:
Box 1 : Set-AzureRmVirtualNetworkGatewayDefaultSite
The Set-AzureRmVirtualNetworkGatewayDefaultSite cmdlet assigns a forced tunneling default site to a virtual network gateway.
Forced tunneling provides a way for you to redirect Internet-bound traffic from Azure virtual machines to your on-premises network; this enables you to inspect and audit traffic before releasing it. Forced tunneling is carried out by using a virtual private network (VPN) tunnel; this tunnel requires a default site, a local gateway where all the Azure Internet-bound traffic is redirected.
Set-AzureRmVirtualNetworkGatewayDefaultSite provides a way to change the default site assigned to a gateway.
Box 2 : 0.0.0.0/0
Forced tunneling must be associated with a VNet that has a route-based VPN gateway. You need to set a "default site" among the cross-premises local sites connected to the virtual network. Also, the on-premises VPN device must be configured using 0.0.0.0/0 as traffic selectors.
Forced Tunneling:
The following diagram illustrates how forced tunneling works
