NEW QUESTION: 1

An integration developer needs to implement a business process that will read data from one source database and write data to a separate target database.

What action should the integration developer take while configuring the WebSphere Adapter for JDBC?

- A. Configure one inbound adapter to read data from the source and one outbound adapter to write data to the target. An XA data source must be used to manage transactions across both databases.
- B. Configure a single inbound adapter to communicate with both databases. The use of an XA data source is optional.
- C. Configure one outbound adapter to read data from the source and a second outbound adapter to write data to the target. The use of an XA data source is optional.
- D. Configure a single outbound adapter to communicate with both databases. An XA data source must be used to manage transactions across both databases.

Answer: C

NEW QUESTION: 2

A company has decided to upgrade its legacy phone system to VoIP. The new phones will download the configurations from a TFTP server each time they boot up. Which of the following firewall ports must be opened to ensure the phones can communicate with the server?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

Explanation/Reference:

NEW QUESTION: 3

Which neighbor-discovery message type is used to verify connectivity to a neighbor when the link-layer address of the neighbor is known?

- A. router advertisement
- B. neighbor solicitation
- C. neighbor advertisement
- D. router solicitation

Answer: B

Explanation:

IPv6 Neighbor Solicitation Message A value of 135 in the Type field of the ICMP packet header identifies a neighbor solicitation message. Neighbor solicitation messages are sent on the local link when a node wants to determine the link-layer address of another node on the same local link (see the figure below). When a node wants to determine the link-layer address of another node, the source address in a neighbor solicitation

message is the IPv6 address of the node sending the neighbor solicitation message. The destination address in the neighbor solicitation message is the solicited-node multicast address that corresponds to the IPv6 address of the destination node. The neighbor solicitation message also includes the link-layer address of the source node.

Figure 1. IPv6 Neighbor Discovery: Neighbor Solicitation Message
