NEW QUESTION: 2

Your customer wants to publish receiving events, such as create ASN, cancel ASN, and create receipt.

Which two steps will you perform to meet this requirement?

- A. Enable the Publish Transactional business events parameter
- B. Enter Outbound Sender details
- C. Enter Early and Late Receipt Tolerances
- D. Enable the Allow routing override parameter
- E. Enable the Publish receiving events parameter

Answer: B,E

Explanation:

NEW QUESTION: 3

How does EIGRP derive the metric for manual summary routes?

- A. It uses the best composite metric of any component route in the topology table.
- B. It uses the worst composite metric of any component route in the topology table.
- C. It uses the best metric vectors of all component routes in the topology table.
- D. It uses the worst metric vectors of all component routes in the topology table.

Answer: A

Explanation:

Explanation/Reference:

Explanation:

For example if your router has a routing table like this:

```
D 192.168.8.0/24 [90/2632528] via 192.168.0.1, 00:00:12,
Serial0/0 D 192.168.9.0/24 [90/2323456] via
1
1
92.168.0.1, 00:00:12, Serial0/0 D 192.168.10.0/24 [90/2195456]
via 192.168.0.1, 00:00:12, Serial0/0 D
92.168.11.0/24 [90/2323456] via 192.168.0.1, 00:00:12,
Serial0/0
```

Now suppose you want to manually summarize all the routes above, you can use this command (on the router that advertised these routes to our router):

```
Router(config-if)#ip summary-address eigrp 1 192.168.8.0
255.255.248.0
```

After that the routing table of your router will look like

this:

D 192.168.8.0/21 [90/2195456] via 192.168.0.1, 00:01:42,
Serial0/0

And we can see the manual summary route takes the smallest metric of the specific routes.

NEW QUESTION: 4

Which two types of actions can trigger an event? (Each correct answer presents a complete solution. Choose two.)

- A. User intervention, such as a mouse click.
- B. Some other program logic, such as a call to the program module.
- C. Adding a delegate keyword.
- D. Declaring the signature of the delegate.

Answer: A,D

Explanation:

* A delegate is a type that holds a reference to a method. A delegate is declared with a signature that shows the return type and parameters for the methods it references, and can hold references only to methods that match its signature.

* Events in the .NET Framework are based on the delegate model. The delegate model follows the observer design pattern, which enables a subscriber to register with, and receive notifications from, a provider. An event sender pushes a notification that an event has happened, and an event receiver receives that notification and defines a response to it.
