\_\_\_\_\_ sends out a message to all other computers indicating it is going to send out data.

- A. CSMA/HD
- B. CSMA/CD
- C. SLIP

**Answer: D**

Note: When computers use the carrier sense multiple access with collision detection (CSMA/CD) protocols, they monitor the transmission activity, or carrier activity, on the wire so that they can determine when would be the best time to transmit data.

Carrier sense multiple access with collision avoidance (CSMA/CA) is an access method where each computer signals its intent to transmit data before it actually does so. pg 390-391
