NEW QUESTION: 1
Which action is the vSmart controller responsible for in an SD-WAN deployment?
A. distribute security information for tunnel establishment between vEdge routers
B. manage, maintain, and gather configuration and status for nodes within the SD-WAN fabric

C. onboard vEdge nodes into the SD-WAN fabric
D. gather telemetry data from vEdge routers
Answer: A
Explanation:
+ Orchestration plane (vBond) assists in securely onboarding
the SD-WAN WAN Edge routers
into the SD-WAN overlay (-> Therefore answer "onboard vEdge
nodes into the SD-WAN fabric"
mentioned about vBond). The vBond controller, or orchestrator,
authenticates and authorizes the
SD-WAN components onto the network. The vBond orchestrator
takes an added responsibility to
distribute the list of vSmart and vManage controller
information to the WAN Edge routers. vBond
is the only device in SD-WAN that requires a public IP address
as it is the first point of contact and
authentication for all SD-WAN components to join the SD-WAN
fabric. All other components need
to know the vBond IP or DNS information.
+ Management plane (vManage) is responsible for central
configuration and monitoring. The
vManage controller is the centralized network management system
that provides a single pane of
glass GUI interface to easily deploy, configure, monitor and
troubleshoot all Cisco SD-WAN
components in the network. (-> Answer "manage, maintain, and
gather configuration and status
for nodes within the SD-WAN fabric" and answer "gather
telemetry data from vEdge routers" are
about vManage)
+ Control plane (vSmart) builds and maintains the network
topology and make decisions on the
traffic flows. The vSmart controller disseminates control plane
information between WAN Edge
devices, implements control plane policies and distributes data
plane policies to network devices
for enforcement (-> Answer "distribute security information
for tunnel establishment between
vEdge routers" is about vSmart)

protocol for an internet protocol (IP) flow.
Options A,C and D are all invalid because these services/tools
cannot be used to get the the IP addresses which are accessing
the EC2 Instances For more information on VPC Flow Logs please
