C. Syslog
Answer: C
Explanation:
Syslog is an event logging protocol that is common to Linux.
Applications will send messages that may be stored on the local
machine or delivered to a Syslog collector. When the Log
Analytics agent for Linux is installed, it configures the local
Syslog daemon to forward messages to the agent. The agent then
sends the message to Azure Monitor where a corresponding record
is created.

Explanation:
Explanation
The command ip nhrp map multicast dynamic should be only used on Hub router, not spoke. If we are running dynamic routing protocols based on multicast (like RIP, OSPF, EIGRP ...) we have to add the command ip nhrp map multicast dynamic in Hub to replicate all multicast traffic to all dynamic entries in the NHRP table (multicast will be proceeded as unicast traffic) - The tunnel source FastEthernet0/0 is equivalent to tunnel source 172.17.0.2, which is the NBMA address of Spoke A.
