Answer: E

NEW QUESTION: 2
HOTSPOT
You need to recommend a solution that meets the AD RMS
requirements of Customer1
and Customer2.
Which actions should you recommend performing for each
customer? To answer, select the appropriate customer for each
action in the answer area.

Answer:
Explanation:

Topic 4, A.Datum Corporation
Overview
A). Datum Corporation is an accounting company.
The company has a main office and two branch offices. The main
office is located in Miami.
The branch offices are located in New York and Seattle.
Existing Environment
Network Infrastructure
The network contains an Active Directory domain named
adatum.com. All servers run Windows Server 2008 R2. The main
office has the following servers and client computers:

Two domain controllers configured as DNS servers and DHCP
servers One file server that has multiples shares One thousand
client computers that run Windows 7
Each branch office has the following servers and client
computers:
--
One domain controller configured as a DNS server and a DHCP
server Five hundred to 800 client computers that run Windows XP
Each office has multiple subnets. The network speed of the
local area network (LAN) is 1 gigabit per second. The offices
connect to each other by using a WAN link. The main office is
connected to the Internet.

Current Issues
The WAN link between the Miami office and the Seattle office is a low bandwidth link with high latency. The link will not be replaced for another year.
Requirements
Application Requirements
The company is developing an application named App1. App1 is a multi-tier application that will be sold as a service to customers.
Each instance of App1 is comprised of the following three tiers:

A web front end A middle tier that uses Windows Communication Foundation (WCF) A Microsoft SQL Server 2008 R2 database on the back end
Each tier will be hosted on one or more virtual machines. Multiple tiers cannot coexist on the same virtual machine.
When customers purchase App1, they can select from one of the following service levels: Standard: Uses a single instance of each virtual machine required by App1. If a virtual machine becomes unresponsive, the virtual machine must be restarted.
Enterprise: Uses multiple instances of each virtual machine required by App1 to provide high-availability and fault tolerance.
All virtual hard disk (VHD) files for App1 will be stored in a file share. The VHDs must be available if a server fails.
You plan to deploy an application named App2. App2 is comprised of the following two tiers:
--
--
A web front end A dedicated SQL Server 2008 R2 database on the back end
App2 will be hosted on a set of virtual machines in a Hyper-V cluster in the Miami office. The virtual machines will use dynamic IP addresses. A copy of the App2 virtual machines will be maintained in the Seattle office.
App2 will be used by users from a partner company named Trey Research. Trey Research has a single Active Directory domain named treyresearch.com. Treyresearch.com contains a server that has the Active Directory Federation Services server role and all of the Active Directory Federation Services (AD FS) role services installed.
Planned Changes
A). Datum plans to implement the following changes:
-
Replace all of the servers with new servers that run Windows Server 2012.
Implement a private cloud by using Microsoft System Center 2012 to host
instances of App1.
In the Miami office, deploy four new Hyper-V hosts to the perimeter network.
In the Miami office, deploy two new Hyper-V hosts to the local

network.
In the Seattle office, deploy two new Hyper-V hosts.
In the Miami office, implement a System Center 2012
Configuration Manager
primary site that has all of the system roles installed.
Implement a public key infrastructure (PKI).
-- ----
-
Notification Requirements
A). Datum identifies the following notification requirements:
Help desk tickets must be created and assigned automatically
when an instance of
App1 becomes unresponsive.
Customers who select the Enterprise service level must receive
an email
notification each time a help desk ticket for their instance of
App1 is opened or
closed.
Technical Requirements
A). Datum identifies the following technical requirements:
-
Minimize costs whenever possible.
Minimize the amount of WAN traffic
Minimize the amount of administrative effort whenever possible.
Provide the fastest possible failover for the virtual machines
hosting App2.
Ensure that administrators can view a consolidated report about
the software
updates in all of the offices.
Ensure that administrators in the Miami office can approve
updates for the client
computers in all of the offices.
-

Security Requirements
A). Datum identifies the following security requirements:
--- --
An offline root certification authority (CA) must be
configured.
Client computers must be issued certificates by a server in
their local office.
Changes to the CA configuration settings and the CA security
settings must be
logged.
Client computers must be able to renew certificates
automatically over the Internet.
The number of permissions and privileges assigned to users must
be minimized
whenever possible.
Users from a group named Group1 must be able to create new
instances of App1
Client computers must be issued new certificates when the
computers are

connected to the local network only.
The virtual machines used to host App2 must use BitLocker Drive Encryption
- in the private cloud. -- (BitLocker). -
Users from Trey Research must be able to access App2 by using their credentials from treyresearch.com.

NEW QUESTION: 3
Which three statements about the high availability configuration on the Cisco 5760 WLCs are true?
(Choose three.)
A. All configuration including certificates are automatically synced between active and standby Cisco WLC.
B. Active Cisco WLCs in a pair can be identified using LED state without issuing any command on the Cisco WLC console.
C. EitherChannel bundles all ports on both active and standby Cisco WLC on a logical port.
D. Cisco WLC with the highest priority in a stack are elected as the active Cisco WLC during the election process.
E. Cisco 5760 WLC uses a dedicated high availability port for high availability and configuration synchronization.
F. Cisco WLC with more reboots is elected as active when the default stack priority is in use.
Answer: B,C,D

NEW QUESTION: 4
Harry is the project manager of the MMQ Construction Project. In this project, Harry has identified a supplier who can create stained glass windows for 1,000 window units in the construction project. The supplier is an artist who works by himself, but creates windows for several companies throughout the United States. Management reviews the proposal to use this supplier and while they agree that the supplier is talented, they do not think the artist can fulfill the 1,000 window units in time for the project's deadline. Management asked Harry to find a supplier who can fulfill the completion of the windows by the needed date in the schedule. What risk response has management asked Harry to implement?
A. Mitigation
B. Transference
C. Avoidance
D. Acceptance
Answer: A
Explanation:

This is an example of mitigation. By changing to a more reliable supplier, Harry is reducing the probability the supplier will be late. It's still possible that the vendor may not be able to deliver the stained glass windows, but the more reputable supplier reduces the probability of the lateness. Mitigation is a risk response planning technique associated with threats that seeks to reduce the probability of occurrence or impact of a risk to below an acceptable threshold. Risk mitigation involves taking early action to reduce the probability and impact of a risk occurring on the project. Adopting less complex processes, conducting more tests, or choosing a more stable supplier are examples of mitigation actions. Answer A is incorrect. Transference is when the risk is transferred to a third party, usually for a fee. While this question does include a contractual relationship, the risk is the lateness of the windows. Transference focuses on transferring the risk to a third party to manage the risk event. In this instance, the management of the risk is owned by a third party; the third party actually creates the risk event because of the possibility of the lateness of the windows. Answer B is incorrect. Avoidance changes the project plan to avoid the risk. If the project manager and management changed the window-type to a standard window in the project requirements, then this would be avoidance. Risk avoidance is a technique used for threats. It creates changes to the project management plan that are meant to either eliminate the risk completely or to protect the project objectives from its impact. Risk avoidance removes the risk event entirely either by adding additional steps to avoid the event or reducing the project scope requirements. It may seem the answer to all possible risks, but avoiding risks also means losing out on the potential gains that accepting (retaining) the risk might have allowed. Answer D is incorrect. Acceptance accepts the risk that the windows could be late and offers no response.
