**Answer:**

Explanation:

### NEW QUESTION: 3

A BIG-IP Administrator uses backend servers to host multiple services per server. There are multiple virtual servers and pools defined, referencing the same backend servers. Which load balancing algorithm is most appropriate to have an equal number of connections on each backend server?

- A. Least Connections (node)
- B. Predictive (node)
- C. Predictive (member)
- D. Least Connections (member)

**Answer: A**

Explanation:

Explanation

The same set of servers provides multiple services, that is, using different ports to provide different services at the same time. The stem requirement is based on server connection

balancing, not server + port, so it is node.
