#### **NEW QUESTION: 1**

You design a Business Intelligence (BI) solution by using SQL Server 2008. You have deployed a SQL

Server 2008 Reporting Services (SSRS) application. The number of users for the SSRS application increases. This results in performance problems. The datasets for the reports are optimized.

You investigate the SSRS deployment and discover the following characteristics:

-Users report that the reports take a long time to run.

-There are a large number of graphical reports that summarize data.

-Subscription processing affects the performance of reports that are run by interactive users.

You need to modify the SSRS infrastructure to resolve the performance problems.

Which scale-out strategy should you use?

**A.** Single SSRS server and a single reporting database server

**B.** Single SSRS server and multiple reporting database servers

**C.** Multiple SSRS servers and multiple reporting database servers

**D.** Multiple SSRS servers and a single reporting database server

**Answer: D**

## **NEW QUESTION: 2**

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You need to examine information about logins, CPU times, and Disk I/O on a particular database in Microsoft Azure.

What should you use?

**A.** Activity Monitor

**B.** SQL Server Data Collector

**C.** SQL Server Configuration Manager

**D.** SQL Server Data Tools (SSDT)

**E.** SQL Server Management Studio (SSMS) Object Explorer

**F.** Sp\_who3

**Answer: A**

Explanation:

Explanation/Reference:

Explanation:

Activity Monitor displays information about SQL Server processes and how these processes affect the current instance of SQL Server.

Activity Monitor is a tabbed document window with the following expandable and collapsible panes:

Overview, Active User Tasks, Resource Waits, Data File I/O, and Recent Expensive Queries.

The Activity User Tasks Pane shows information for active user connections to the instance, including the

following column:

\* Login: The SQL Server login name under which the session is currently executing.

The Recent Expensive Queries Pane shows information about the most expensive queries that have been run on the instance over the last 30 seconds, including the following column:

\* CPU (ms/sec): The rate of CPU use by the query
