It is helpful for clearing up your nervousness before test, The **Valid NS0-603 Test Blueprint** least one is about shaking you off anxieties of preparation and get the certificate of the NetApp Certified Hybrid Cloud - Architect pdf torrent easily.

The passing rate of our NS0-603 guide materials is high and you don't need to worry that you have spent money but can't pass the test, If you don't get NetApp Certified Hybrid Cloud - Architect training material in your email, please you check your junk-box to see if NS0-603 study dumps is there sometimes.

NEW QUESTION: 1

As part of large organization's security policy how should a wireless security professional address to problem of rogue access points?

A. Use a WPA-2 Enterprise complaint security solution with strong mutual authentication and encryption.

- B.** All authorized APs should have their wired ports quarantined to specific VLAN for threat neutralization and analysis.
- C.** A trained employee should install and monitor and WIPS rogue detection and response measures.
- D.** Hide the SSID of legitimate APs on the network so that intruders cannot copy this parameter on rogue APs.
- E.** Conduct thorough facility scans with spectrum analyzers to detect rogue AP RF signature.

Answer: C

Explanation:

It should be noted that most businesses do not use a wired 802.1X/EAP solution for wired port control. Therefore a WLAN monitoring solution known as a wireless intrusion detection system (WIDS) is always needed to detect potential rogue devices. Most WIDS vendors prefer to call their products a wireless intrusion prevention system (WIPS). The reason that they refer to their products as prevention systems is that they are all now capable of mitigating attacks from rogue access points and rogue clients.

NEW QUESTION: 2

What are two important guidelines to follow when implementing VTP? (Choose two.)

- A.** Enabling VTP pruning on a server will enable the feature for the entire management domain.
- B.** All switches in the VTP domain must run the same version of VTP.
- C.** Use of the VTP multidomain feature should be restricted to migration and temporary implementation.
- D.** When using secure-mode VTP, configure management domain passwords only on VTP servers.
- E.** CDP must be enabled on all switches in the VTP management domain.

Answer: A,B

Explanation:

Enabling VTP pruning on a VTP server enables pruning for the entire management domain. Making VLANs pruning-eligible or pruning-ineligible affects pruning eligibility for those VLANs on that trunk only (not on all switches in the VTP domain). All switches in a VTP domain must have the same domain name, but they do not need to run the same VTP version.

http://www.cisco.com/c/en/us/td/docs/switches/lan/catalyst3560/software/release/122_52_se/configuration/guide/3560scg/swvtp.html#wp1225071

NEW QUESTION: 3

Your network contains an Active Directory forest. The forest contains a single domain named contoso.com. You have an

Exchange Server 2013 organization named Contoso. You plan to create an additional SMTP domain named sales.contoso.com. You will use sales.contoso.com as the primary SMTP address for the users in the sales department. You create a new email address policy and apply the policy to the sales users.

New sales users report that when they attempt to access their email from the Internet for the first time by using Microsoft Outlook 2010, they fail to connect. The sales users connect to their mailbox internally successfully by using Outlook 2010. All other users can connect to their mailbox from the Internet and internally.

You need to ensure that the new sales users can connect to the Exchange Server 2013 organization by using Outlook Anywhere from the Internet.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Modify each existing Service Connection Point (SCP) object in Active Directory to point to autodiscover.sales.contoso.com.
- B. On the Client Access servers, deploy a new certificate that includes the autodiscover.sales.contoso.com name.
- C. Create a new Service Connection Point (SCP) object in Active Directory that points to autodiscover.sales.contoso.com.
- D. Create a new Autodiscover virtual directory on the Client Access servers and configure ExternalURL to use autodiscover.sales.contoso.com.
- E. From DNS Manager, create a host (A) record for autodiscover.sales.contoso.com.

Answer: B,E
