You don't need to spend lots of time in practicing the questions of CompTIA PDI+ Beta Exam free demo, No help Full Refund, 24/7 after sale service- PD1-001 exam prep material.

NEW QUESTION: 1

A network engineer configures port security and 802.1x on the same interface. Which option describes what this configuration allows?

- A.** It allows port security to secure the IP address that 802.1x authenticates.
- B.** It allows 802.1x to secure the MAC address that port security authenticates.
- C.** It allows port security to secure the MAC address that 802.1x authenticates.
- D.** It allows 802.1x to secure the IP address that port security authenticates.

Answer: C

Explanation:

802.1X and Port Security You can configure port security and 802.1X on the same interfaces. Port security secures the MAC addresses that 802.1X authenticates. 802.1X processes packets before port security processes them, so when you enable both on an interface, 802.1X is already preventing inbound traffic on the interface from unknown MAC addresses.

- A. ã.„ã.„ã.^
- B. ã.-ã.„

Answer: A

NEW QUESTION: 4

Your network contains a server named Server1 that runs Windows Server 2012. Server1 has the Hyper-V server role installed. Server1 hosts 10 virtual machines that run Windows Server 2012. You add a new server named Server2. Server2 has faster hard disk drives, more RAM, and a different processor manufacturer than Server1. You need to move all of the virtual machines from Server1 to Server2. The solution must minimize downtime.

What should you do for each virtual machine?

- A. Export the virtual machines from Server1 and import the virtual machines to Server2.
- B. Perform a storage migration.
- C. Perform a live migration.
- D. Perform a quick migration.

Answer: A

Explanation:

The different processor manufacturer is the key here. Storage, Live, and Quick all require same manufacturer.
